MASS PLANTING OF KALMIA LATIFOLIA (Mountain Laurel).
(See page 3)

GROWING OF BROAD LEAVED EVERGREENS AND PLANTS OF LIKE NATURE AND OF THE WILDS

ALL PLANTS of wild nature should be given the same conditions under which they grew as regards shade and light-dryness or dampness of soil, rocks, earth and leaf mold.

Rhododendrons, Azaleas, Leucothoe, Kalmia, and many other plants and bulbs are acid soil loving. They should never be given lime in any form. The soil should be rich with decayed vegetable matter such as leaf mold, decayed manure, etc. A mixture of oak leaves and other acid forming material is good. The soil should be deep and porous. Rhododendrons need plenty of moisture yet well drained soil. If the soil is too heavy as in clay soil lighten with sand and material as above mentioned. Never allow your plants to suffer for water. On receiving them, soak well in water before planting and keep **WELL WATERED**. We will be glad to answer all questions as to any plant or plants we have which will enable your successful planting and cultivation.

PLANT FOOD PROVIDED BY NATURE. LEAF MOLD.

Our leaf mold is collected from RHODODENDRON beds and has no artificial treatment. This food will give the acid forming material to the soil so much needed by most of our native plants. A natural food that will insure better root system, foliage and flowers, bringing new life to old land when in need of acid forming material.

50 lbs.—60c; 100 lbs.—90c; 200 lbs.—\$1.75; 500 lbs.—\$3.75

MOUNTAIN LAUREL (*Kalmia Latifolia*)
